582 Pleasant Street

Application of Bell Atlantic Mobile of Massachusetts d/b/a Verizon Wireless for Design and Site Plan Review

Answers provided by the Applicant's agent, Michael Giaimo

Section 106 Review

The Section 106 review (which is not a permit) is ongoing, and the plans submitted to the planning board with this modification application have been revised in direct response to the concerns expressed concerning potential visual impact of the louver replacement and externally placed air conditioning equipment. Because there is no longer any potential for visual impact from this facility as redesigned, I am confident that SHPO will make a favorable determination on the basis of these revised plans in due course. Since the Section 106 review is pursuant to a federal statute that does not provide for enforcement by local authorities or provide a role for local planning board review, the Belmont Planning Board has no proper basis for refusing to proceed with this site plan approval before the Section 106 process is completed. Moreover, the Planning Board has established precedent by proceeding with the January hearing on this matter notwithstanding that the Section 106 review had not yet concluded.

Maintaining the Wood Louvers

Verizon Wireless prefers that its antennas that are enclosed in structures transmit through an RF transparent material. That is the standard approach in order to optimize performance. In this case, given the unexpected concerns expressed by members of the public about removing the wooden louvers from this non-contributing structure in the historic district, Verizon Wireless engineers took another look and determined that they would be able to obtain an adequate signal strength, taking into account the openness of the louvers.

Eliminating the External Condensor

My understanding is that Verizon Wireless was able to make do at this site without air conditioning because it changed its design to use equipment that is typically employed in outdoor situations and therefore is more heat tolerant than the originally proposed equipment. Verizon Wireless' engineers evaluated the inside of the steeple and determined that there was enough ventilation for the equipment space to employ that equipment, and therefore was able to redesign the site without external condensers. Had it not been possible to do that, there was an alternate plan which would have placed the external condensers on the ground in an area where landscaping would have prevented it from being viewed from any public location.
