ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

INTRODUCTION

January 31, 2019

1.0 INTRODUCTION

1.1 ORDER OF CONSENT

This report is submitted in compliance with U.S. Environmental Protection Agency (EPA) ORDER ON CONSENT (Order) Docket No. CWA-AO-R01-FY17-11. In accordance with Parts IV.8 of the order, this report summarizes illicit discharge investigations conducted in areas tributary to Spy Pond and the remaining tributaries to Little Pond.

As presented in the Order, from 2012 – 2016 the EPA collected several water quality samples within the Spy Pond and remaining Little Pond tributary areas. The EPA sample results are included for reference in Appendix A.

1.2 BACKGROUND

Figure 1 illustrates the proximity of both the Spy Pond and Little Pond tributary areas within Belmont. Storm drains in these tributaries, and all other tributaries in Belmont, are entirely separate from the sanitary sewer system.

The Spy Pond tributary areas (15 & 15A) are comprised of approximately 13,000 linear feet of storm drains that range in size from 10" diameter to 4'x3' box culvert. Storm drains within the Spy Pond tributary ultimately discharge to Little Pond and Alewife Brook.

The Little Pond tributary areas (9, 9A, 11, 11A & 12), excluding the tributary areas from Spy Pond and Winn's Brook, are comprised of approximately 5,100 linear feet of storm drains that range in size from 10" to 36" diameter. Stantec has previously conducted extensive IDDE work in the Little Pond areas.

ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

OUTFALL & UPPER TRIBUTARY AREA SAMPLING
January 31, 2019

2.0 OUTFALL & UPPER TRIBUTARY AREA SAMPLING

2.1 OUTFALL SAMPLING

In November 2016, Stantec conducted outfall sampling at all outfall's tributary to the Mystic River watershed (Outfalls 1 – 15). Each outfall was sampled once during "wet-weather"¹ and once during "dry weather"². Samples were collected between 6:30 A.M. and 10:30 A.M. during the "peak sewer usage" period. Samples were analyzed for both E. coli and Enterococci in an independent laboratory. Stantec staff utilized field-kits to test for surfactants, total chlorine, ammonia, salinity, conductivity, temperature, and pH.

The sampling results for Little Pond Outfalls 9, 9A, 11, 11A & 12 and Spy Pond Outfalls 15 & 15A are presented in Table 1 and illustrated in Figures 2 - 4. Outfall 9 was not flowing during both dry-weather and wet-weather sampling. Therefore, Outfall 9 was eliminated from further investigation.

2.2 UPPER TRIBUTARY AREA SAMPLING

Based on the sample results from Outfalls 12, 15 and 15A, additional sampling was conducted to identify smaller tributaries within each sub-catchment area suitable for more intensive investigations. Sampling was conducted during dry weather and during peak sewer usage periods. Samples were collected for E. coli. Tributary areas that were "dry" were eliminated from further sampling. Certified laboratory results for the sampling are provided in Appendix B. Due to their small size, tributary sampling was not required in areas 11 and 11A.

Results for tributaries 12, 15 and 15A are presented in Table 2 and illustrated in Figures 2 - 4. Five tributaries were designated for further investigation as noted below.

- Dyed-water Testing
 - Brighton St north of Simmons Ave (Outfall Area 15) – Figure 5
- CCTV Inspections
 - Knox St Neighborhood (Outfall Area 15A) – Figure 6
 - Oliver Rd (Outfall Areas 11, 11A & 12) – Figure 7

Sampling will be conducted to verify the effectiveness of repairs/rehabilitation and/or further identify sources of contamination as required.

¹ "Wet Weather" herein refers to any point in time in which there has been greater than 0.25 inch of rainfall over the previous cumulative 24 hours.

² "Dry Weather" herein refers to any point in time in which there has been less than 0.1 inch of rainfall over the previous cumulative 24 hours.

ILLCIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

DYED-WATER TESTING
January 31, 2019

3.0 DYED-WATER TESTING

Dyed-water testing is conducted to determine if a building service lateral is an illicit connection. Typically, the mainline has been rehabilitated or replaced. The sewer service is tested by flowing dyed-water from a toilet or sink and then monitoring the downstream sewer and drain manholes for traces of dye. The internal plumbing is also inspected for inadvertent cross connections. If the homeowner was not present during the initial visit, a "Sewer Work Notice" was left at the home requesting the homeowner call for an appointment. A copy of the notice is included in Appendix C.

Dyed-water testing was conducted in Area 15 on Brighton St north of Simmons Ave. Of the 10 houses targeted, 8 tests were completed, with one direct connection to the storm drain system identified as depicted in Figure 8. A direct connection is a sanitary sewer service directly connected to the storm drain.

4.0 CCTV INSPECTIONS

CCTV inspections are conducted to identify structural defects (cracked or broken pipe), maintenance issues (debris or blockages) and infiltration/exfiltration sources. Both mainline and service laterals were inspected in the target areas.

Outfall Areas 11, 11A & 12 - Oliver Rd Area – The 235 LF of mainline sewer was in fair to poor condition with moderate to severe cracking, sags and offset joints. The 20 service laterals were also in fair to poor condition with defects including offset/separated joints, cracks, root intrusion and sags.

Outfall Area 15A - Knox Street Neighborhood – Scheduled to be CCTV inspected.

5.0 ILLICIT CONNECTION IDENTIFICATION

The sampling program has successfully identified five (5) areas with suspected illicit connections. Dyed-water testing identified one (1) house sewer service connected directly to the storm drain. 235 LF of sewer main and 20 house service are potential sources based on CCTV inspections. Planned activities for areas tributary to Little Pond and Spy Pond as follows:

Outfall Area 15 (Spy Pond)

Remove direct connect sewer service from the storm drain and conduct follow-up verification sampling.

ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

ILLICIT CONNECTION IDENTIFICATION
January 31, 2019

Outfall Area 15A (Spy Pond)

Complete CCTV inspection in Knox Street and conduct dyed-water testing as required based on CCTV results.

Outfall Area 11, 11A & 12 (Little Pond)

Evaluated for rehabilitation alternatives for the Oliver Rd Area.

We anticipate that this work will be completed for incorporation into the July 31, 2019 Compliance Report.

Note 1: MA Water Quality Standard single sample maximum for E. coli in Class B waters is 235 cfu/100ml

Note 2: MA Water Quality Standard single sample maximum for enterococcus in inland Class B waters is 61 cfu/100 ml

Note 3: Color coding is provided to assist in understanding and prioritization for IDDE purposes - any color in the E. coli or Enteroto column indicates a violation of water quality standards

** Location 6/19 D was a duplicate of WinnB for quality control purposes

E. coli - color key: Red ≥ 10,000 col/100ml, Orange ≥ 1260 col/100ml, Yellow ≥ 235 col/100ml, No Shading < 235 col/100ml

Enteroto - color key: Red ≥ 1000 col/100ml, Orange ≥ 350 Yellow ≥ 61 col/100ml, No Shading < 61 col/100ml

NH3 - color key: Red ≥ 6 mg/L, Orange ≥ 0.5 mg/L, Yellow ≥ 0.0 mg/L

Surfactants - color key: Red ≥ 1.0 mg/L, Orange ≥ 0.5 mg/L, Yellow ≥ 0.25 mg/L, No Shading < 0.25 mg/L *** may give false positive at salinity greater than 1 ppt

PPCP color key (X times Reporting Limit): 3X 10X +100X

CI2 - color key: Red ≥ 1.0 mg/L, Orange ≥ 0.3 mg/L, Yellow ≥ 0.02 mg/L, No Shading < 0.02 mg/L

ND – not detected above the associated detection limit

NA – not applicable (analyte not tested for at that site at this time)

Reporting Limits

E. coli = 4 MPN/100mL

Enterococcus = 10 MPN/100mL

Surfactants Field = 0.1 mg/L

Ammonia Field = 0.1 mg/L

Chlorine Field = 0.02 mg/L

Appendix C SEWER WORK NOTICE

SEWER WORK NOTICE

Building Inspection & Dyed-Water Testing

May 2018

Dear Property Owner/Resident,

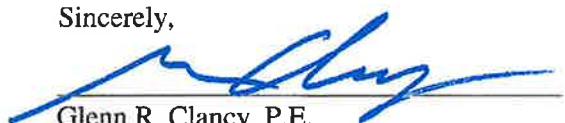

In April 2017, the Town received an ORDER ON CONSENT (Order) from the United States Environmental Protection Agency (EPA) for high levels of contamination at various storm water outfalls. The Town of Belmont has contracted the engineering firm Stantec Consulting Services, Inc. to conduct extensive investigations to determine the source(s) of contamination.

The investigations include building plumbing inspections and dyed-water testing in selected neighborhoods. Dyed-water testing involves applying dyed-water into a toilet or sink. The dyed-water flows through the piping to the street where it can be observed from an opened manhole. The dye is non-toxic and will not cause any damage to your property. The investigation takes approximately 30 minutes to complete and will not impact your property in any way.

Technicians will be conducting dyed-water testing Monday through Friday from 9:00 A.M. to 5:00 P.M. If you are generally not home during this period, please contact Ara Yogurtian at the Office of Community Development to make an appointment (617) 993-2657.

This work is required even if your home has been previously inspected and/or dyed-water tested. The Town thanks you for your continued cooperation in order that meaningful and useful data regarding the Town's sanitary sewer and storm drain systems is obtained. If you have any questions or would like to schedule an appointment please contact Ara Yogurtian at the Office of Community Development at (617) 993-2657. Additional information is available online at the Office of Community Development website at www.town.belmont.ma.us.

Sincerely,

Glenn R. Clancy, P.E.
Director Office of Community Development

TABLE 1
NOVEMBER 2016 - INITIAL OUTFALL SAMPLING OF SPY POND & LITTLE POND
BELMONT, MASSACHUSETTS
