Ellen,

Here is the exchange on the knotweed patches. The Joe Hibbard proposal is a separate item.

Please let me know if you have any questions

Jeff

to me, Gabe, Ryan

Hi Jeff,

Stepping in here for Gabe because he is currently leading the team at Mount Auburn Cemetery with a plant installation.

I would suspect that next season that cost is reduced based on the treatment from this summer, more in the \$1800 - \$2000 range.

Thank you Jeff,
Miles

Gabe,
Thanks for your reply. Should we consider the \$2,450 an annual amount? The knotweed will require repeat assaults.
Cheers,
Jeff

Hi Jeff

We are happy to tackle those populations.

We estimate that the population near the southern tip of A1 and the population near the old McLean parking lot (I believe between markers 9 and 10?) will cost \$2,450.

You can set Leonard loose on that sparse population along the fallen log that we sat on during our walk.

Let me know if you have any questions.

Thanks Jeff

Gabe

Hey Gabe,

Further to our site visit to scout the knotweed patches on Lone Tree Hill, let me know if Parterre would like to propose to do the work in managing these two or three invasive footholds. If not, the LMC can either let nature take its course for now, or set Leonard loose on those areas. The Land Management Committee will likely meet on July 7, and I need to have a response that evening.

Kind regards,
Jeff North
